

# SF TOOLS™

## Shrinkfast 200™ SAFETY CERTIFICATIONS

The SF Tools Shrinkfast 200™ is the first hand-held shrink wrap heat tool to receive Canadian cUL Safety Certification.

SF Tools has obtained Canadian cUL safety certification for our Shrinkfast 200™ (formerly our model 998). This Underwriter's Laboratories certification is another example of the emphasis SF Tools places on the consumer's safety in the heat shrink tool marketplace.

"On many levels this is significant benefit to our Canadian customer base," said Ryan Polcyn, Vice President of Dr. Shrink, Inc, a leading distributor of Shrinkfast heat tools in Canada. "Our customers appreciate the importance of product safety, while not sacrificing performance and the... cUL certification further exhibits why [SF Tools] is in a class by itself."

The Shrinkfast 200™ now maintains insurance grade safety certifications including:

- UL® - United States
- cUL – Canada
- CE – European Union

These international safety certifications prove our technical innovation throughout North America and Europe with a clear focus on user safety.

SF Tools heat tools are sold worldwide with over 140 full-service distributors. These distributors offer our heat tools along with the shrink film accessories to provide customers a complete, turnkey service when shrink wrapping any application.

Our propane-fired heat tools are currently used in the following industries:

- Marine
- Packaging & Transportation
- Construction
- Property Maintenance

With our world headquarters located in Newport, New Hampshire, we offer the most widely used heat tools in shrink wrapping and directed heat applications. Since 1972, SF Tools heat tools have been used in numerous commercial, industrial and residential applications such as storage, transportation, packaging, shipping, weather proofing, containment protection and chemical-free weed removal.
